

"Your first injection"

~~Directly depending on external frameworks~~

Abstract away those pieces

```
class Logger {  
    fun log(tag:String, message: String): Unit {  
        Log.d(tag, message)  
    }  
}
```

```
// Other pieces of the architecture:  
logger.log("Use Case", "Photos not found!")
```

Wrong: We're strongly **depending** on the
Android framework!
